News Release NL341 November 2019

AutoLab 7800 AAS

-Forget atomic absorption as you know it-

Think of Multichannel AAS that can analyse your element program simultaneously (similar to plasma emission spectroscopy) but at a fraction of the costbut the same sensitivity

Our new AutoLab 7800 series is a new generation of AAS spectrometers that can do everything. The standard instrument is a fully automated AAS spectrometer with options for a graphite furnace, hydride analysis, auto sampling, emission and fluorescence. It also allows automated multi channel simultaneous analysis of elements just like a plasma emission spectrometer but at a fraction of the cost but with the same sensitivity

Features

Cost 7800 AAS £9000
HCL lamps £90 each

Why pay more ?

Fully automated instrument control

D2 background correction

Graphite furnace option

Auto sampling

Ultra reliable design

The best sensitivity available

The only game in town
